

The following items are required from the backend team to complete the DearGiver production deployment. Items are listed in priority order. Please action items 1 and 2 as soon as possible.

1. Stripe Publishable Key (NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY) Priority: P4 HIGH — Blocking

The frontend requires the Stripe publishable key to initialise the Stripe.js SDK and process payments. Since the Stripe account is managed by the backend team, please provide this key.

- What is needed:** Stripe Publishable Key — starts with pk_test_... (test) or pk_live_... (production)
- Where to find it:** Stripe Dashboard | Developers | API Keys | Publishable key
- How to apply:** Provide the key to the frontend team | we will add it to Vercel
- Please provide BOTH keys if available:

```
# Test environment (for staging/development)
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY=pk_test_...

# Production environment (for live payments)
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY=pk_live_...
```

Without this key, the donation/payment feature is completely non-functional in production.

2. Stripe Checkout Redirect URL Configuration Priority: P4 HIGH — Actionable

After a Stripe Checkout payment completes or is cancelled, Stripe redirects the user back to the frontend. Currently the backend derives this URL from the request Origin header, which works locally (localhost:3000) but fails in production.

- Issue:** Production redirects land on localhost:3000/success instead of binding-minds.vercel.app/donation/success
- Impact:** Users completing a real payment cannot return to the app — they see a browser error page
- Please add the following environment variables to the backend server:

```
PUBLIC_FRONTEND_URL=https://binding-minds.vercel.app
# OR explicitly:
CHECKOUT_SUCCESS_URL=https://binding-minds.vercel.app/donation/success
CHECKOUT_CANCEL_URL=https://binding-minds.vercel.app/donation/cancel
```

This is the highest priority item. Without this, the donation flow is broken in production.

3. Increase API pageSize Limit (50 !' 500+)

Priority: Ø=ßá M

The frontend Tax Summary PDF feature downloads all donations for a given NZ tax year in a single PDF document. The current API limit of 50 records per page means users with more than 50 donations will have an incomplete tax summary.

Endpoint: GET /api/v1/me/donations?page=1&pageSize=500

Current limit: 50 records per page (as per API_FOR_FRONTEND_DEVELOPERS.md §5.4)

Requested limit: 500 records per page (or configurable upper bound "e 500)

Tax year runs 1 Apr – 31 Mar. Power users may have 50+ donations in a year.

4. Charity Stripe Connect Account IDs

Priority: Ø=ßá M

Each charity on the platform needs its own Stripe Connect account ID to receive donations. Currently all donations use a single test account ID. We need the real IDs for each registered charity.

Current state: All campaigns use acct_1TLekBRHr11OamkF (test only)

Required format: acct_xxxxxxxxxxxxxxxx (Stripe Connected Account ID)

Source: DB table: charity_payment_accounts.stripe_account_id

Please provide a mapping of charity name !' Stripe Connect account ID so the front file.

Without correct account IDs, donations are not recorded in the DB (server-side warning only).

5. Add charity_registration_no to Donations API

Priority: Ø=ßá M

NZ donation receipts (required for IRD tax credit claims) must include the charity's Charities Services registration number (CC number). Currently this field is not included in the donations API response.

Endpoint: GET /api/v1/me/donations

Missing field: charity_registration_no (e.g. "CC12345")

Requested response shape (addition only):

```
{
  "charity_display_name": "Auckland City Mission",
  "charity_registration_no": "CC12345", // ! ADD
  "donation_amount_minor": 5000,
  ...
}
```

Currently receipts show "CC No: Pending". This is cosmetic but important for IRD compliance.

6. Backend Validation: Minimum Donation \$20

Priority: 0=3a

The frontend enforces a minimum donation of NZD \$20 (per business decision). However, a user calling the API directly (bypassing the UI) could submit a smaller amount. Please add server-side validation.

Endpoint: POST /api/v1/checkout/donations

Rule: amount < 20 ! HTTP 400 with error.code = "minimum-amount-

```
// Suggested error response
{
  "error": {
    "code": "minimum-amount-not-met",
    "message": "Minimum donation amount is $20"
  }
}
```

OPEN QUESTION — Requires Decision

Tax Receipt Amount Basis

What amount should appear on NZ donation tax receipts? Option A: Donor's payment amount (e.g. \$50.00). Option B: Charity's net received amount after fees (e.g. \$47.37 after Stripe + platform fee). NZ IRD guidance preferred. Currently using Option A.
